

Engineering Asset Management Services that make a difference

Rmada offers its clients cost effective solutions for the Through Life Management of assets. With over 100 years combined experience working with the MOD Rmada takes pride in identifying customer requirements and exceeding expectations.

We are at the forefront of applying modern concepts of engineering asset management, embracing all the relevant technologies that can transform a good maintenance system into world-class.

Rmada can provide a full range of IUE support and management services.

About Rmada

Rmada has a team of highly motivated consultants with a wealth of knowledge and experience in the development of engineering support solutions.

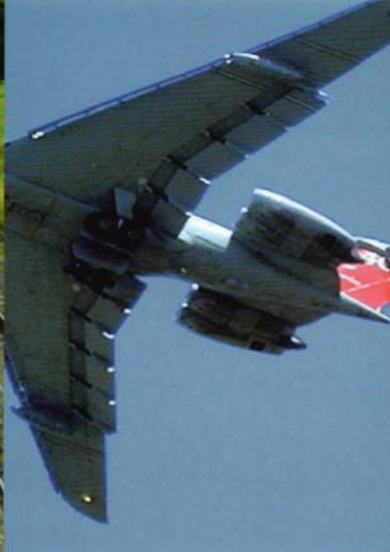

Rmada's consultants have been actively involved and influential in the development of Defence Standards for Reliability Centred Maintenance (RCM), 02-45 and 00-45, the ILS requirement for major new projects and development of computer-based training products.

Our open and friendly approach enables us to quickly integrate into the customer environment, understand the requirements and deliver a quality product first time.

Maintenance Review Increases Availability

Using a process designed by Rmada for the MOD, we have completed a review and rationalisation of the maintenance for military platforms. Directed tasks were reduced by nearly 50% and availability increased by reducing the downtime required for maintenance.

The Framework Agreement for Technical Support (FATS)

Rmada is able to supply the following areas of technical support

Rmada is an engineering consultancy specialising in engineering asset management and decision support.

We have a proven track record in adapting the methods used to determine commercial aircraft maintenance and applying them successfully to industrial and military assets.

In a world of ever-decreasing support budgets we are confident that Rmada can work with you to deliver safe and defensible maintenance solutions that will reduce the costs of ownership for the assets in your service or industry.

- Availability Reliability and Maintainability
- Benefits Analysis
- Business Case Support
- Business Process Simulation
- Computer Technologies
- Contracting for Availability and Capability
- Engineering Risk Consulting
- Health Monitoring Systems
- Lean Manufacturing
- Maintenance Requirements
- Parts Management
- Programme Management
